Skills

- Languages** Python, HCL, Shell Scripting, C/C++
- Skills** Cloud Solutions (AWS, GCP), Agile & Project Management, DevOps & CI/CD, Cybersecurity, Linux Admin, High Availability
- Tools** Docker & Kubernetes, Terraform/OpenTofu, Git, Unit Testing, Redis, ElastiCache, DynamoDB, CI/CD (GitHub Actions, Jenkins)

Experience

Infrastructure Engineer

San Francisco, CA

Roboflow

September 2024 - Present

- Built and maintained scalable infrastructure for a leading computer vision startup
- Participated in maintaining SOC2 Type 2 certification
- Built and deployed in a multi-cloud environment using AWS and GCP

Lead Infrastructure Software Engineer

Los Altos, CA

Semiotic Labs - Odos.xyz

April 2022 - February 2024

- Sole infrastructure engineer at a seed-stage DeFi startup.
- Scaled platform to handle \$15B+ USD and 1M+ users.
- Built on GCP (GKE Autopilot, Cloud Run, Memorystore) and AWS (ECS Fargate, Lambda, ElastiCache).
- Focused on serverless technologies to minimize maintenance burden.
- Architected and launched a public API with FastAPI and comprehensive documentation.
- Led SOC 2 Type 2 audit initiative, implementing security and compliance strategies, including Okta integration for federated RBAC in AWS.
- Designed CI/CD pipelines with GitHub Actions and Spacelift, including ephemeral ARM64 runners.
- Built monitoring, alerting, and observability with CloudWatch and BetterUptime.

Infrastructure Software Engineer, Deep Learning Libraries

Santa Clara, CA

NVIDIA

August 2021 - April 2022

- Managed and optimized Jenkins CI/CD pipelines for CUDA-based deep learning libraries, supporting seamless software releases.
- Coordinated cross-functional teams to ensure timely delivery of critical software updates and features.
- Participated in the launch deliverables for the Hopper (H100) launch.

DevOps Software Engineer

San Jose, CA

Sleep Number Labs

April 2020 - August 2021

- Established and scaled a Jenkins-based CI/CD platform for the entire engineering organization.
- Grew the CI/CD team from one to four to support the newly built platform.
- Implemented Scrum methodologies, leading sprints and maintaining backlogs to improve project transparency and team productivity.
- Developed robust security enhancements for cloud infrastructure, significantly increasing system security and compliance.
- Facilitated improved collaboration between development and operational teams, aligning technical projects with business goals.

Embedded Software Engineer

San Jose, CA

Sleep Number Labs

June 2018 - April 2020

- Engineered embedded software solutions, leading to improved product functionality and customer satisfaction.
- Participated in the migration from a linaro-based system to a Yocto-based system.
- Containerized device-specific software, significantly streamlining development and testing processes.
- Modernized build processes by transitioning to CMake and Ninja, enhancing build performance and maintainability.
- Designed and built an RTOS development framework anchored on modern CMake and code reuse between products and platforms. Integrated tightly with VS Code to act as a full replacement for MCUXpresso, MPLab X, and IAR, including ARM debugging.

Education

San Jose State University

San Jose, CA

B.S. Computer Engineering

December 2018
